- Visual Scripting
- Unreal Engine
- Unity
- Valve Hammer Editor (Source)

INTEREST

- Triathlon
- Calisthenics
- Concert Photography
- Videography
- Video Games

ABOUT ME

I am a **Level Designer** from Eskisehir. Although I studied **Agricultural Engineering** at university, I have always been interested in playing games and playing games is one of the activities I have enjoyed since I was little and what made me start making games was a game called Cube World, a game whose beta I played thousands of hours but which was a complete disaster when it came out, this game was made by 2 people so I started thinking why don't I make a better version of this game and when I started developing games I realised that it was not such an easy job. **I participated in game jams, I participated in game development communities** and level design started to interest me at that time, the levels I made in game jams were played and liked by other people and I decided to continue my career in level design. I still have the idea of making another Cube World game somewhere inside me, but now I seem to have found a job I like more.

WORK EXPERIENCE

Red Axe Games

23.11.2024 - 19.02.2026

Level Designer

- I worked on The Enigma Cases
- I designed the open world map with murder locations and puzzle locations
- I helped the environment designer create the environment.
- I placed colliders that regulate the increase and decrease of sounds as the player moves from a closed area to an open area, determining where the player will hear which sounds in the game
- I guided the player using light and moving objects.
- By establishing strong communication with game designers, environment designers, and game developers, we made the environment lively and functional.

EDUCATION

Osmangazi University

2022-2026

agricultural engineering

Anadolu University

2022-2026

Management information systems
